Cyber Security - Are we fighting a lost battle?

Cyber security is not a matter of "if" a cyber attack will happen but a question of "how" and "what" actions companies can take "when" there will be a security breach.

With hackers seeking out companies with cyber insurance, insurers are pulling back and jacking up premiums as attacks show no sign of abating (J. Rundle et al)

Herff Jones completely unaware of breach until students complained on social media about fraudulent charges to their payment cards.(I. Ilascu)

88% of UK data breaches caused by human error, not cyberattacks (L. Ingham)

A cyber attack on Irish health service computer systems is "possibly the most significant cybercrime attack on the Irish state" (BBC News)

Answers demanded on how the Transportation Security
Administration probes pipeline security, after a cyberattack on the East Coast's main fuel conduit

(D. Uberti)

The year 2020 broke all records when it came to data lost in breaches and sheer numbers of cyber-attacks on companies, government, and individuals (C. Brooks)
